NEMESI & PARTNERS

OFFICE
PROFILE

IWHO

Nemesi & Partners was founded in 1997 in Rome, Italy. Raised in the Italian market, nowadays Nemesi is developing projects at international scale.

Nemesi is at the forefront of architecture combining **Italian sophistication** with high quality services and technical know-how to satisfy clients' needs. In recent years, Nemesi developed complex projects with interrelated subjects and themes, in a constant exploration of the possibilities of design and architecture.

A special attention is dedicated to research new shapes of the contemporary language, by experimenting **new architectural visions** and technologies, with a specific focus on **environmental sustainability**.

Nemesi has experience in architectural projects, urban planning and infrastructure design.

Arch. Michele Molè is Nemesi's principal and creative director.

Since 2007, arch. Susanna Tradati is Associate Partner.

In 2008 NEMESI & PARTNERS SRL joined Nemesi Studio to provide integrated professional services.

NEMESI & PARTNERS

WORK
ORGANIZATION

MICHELE MOLE'

Director

Architect since 1994

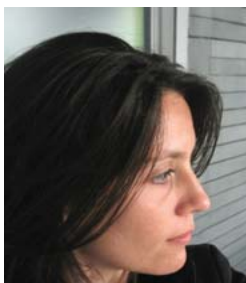

Registered at Ordine degli Architetti N. 10388

Founder of Nemesis Studio in 1997.

In his professional career he obtained many awards, like the Medal from the President of the Italian Republic, for his contribution to Art and Culture.

Michele Molé completed his Ph.D. in 1999 with the doctoral thesis called 'The Project of Difference'.

Since 2000 Prof. Molé has been Visiting Professor at Prima Facoltà di Architettura "La Sapienza", giving lectures in Italy and abroad.

SUSANNA TRADATI

Associate partner

Architect since 2000

Registered at Ordine degli Architetti N. 14226

B.A. in architecture - specialization in urban design

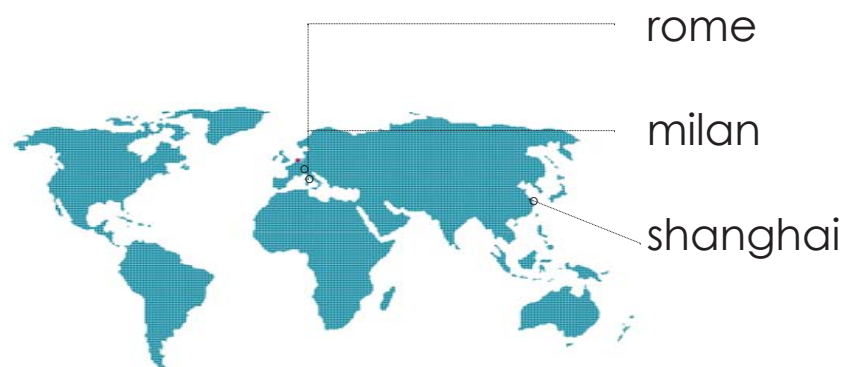

She collaborates with Nemesis since 2004.

She is associate of Nemesis ^ Partners since 2007.

ARCHITECTURE LANDSCAPE

WAY- ARCHITECTURE LANDSCAPE

INTRO_00

BEYOND ARCHITECTURE

ARCHITECTURE
+
LANDSCAPE

Nemesi's architectural design is often related to landscape dimension. In many project Nemesi worked on the idea of an architecture-landscape, where architecture is conceived like part of the landscape and gives its contribute to design the landscape. Italian landscape is a natural + man-made landscape, and the sum of them creates its huge and unique value, recognized all over the world. Regardless of the scale of the project, Nemesi means architecture as the strength of the landscape that every building can reveal.

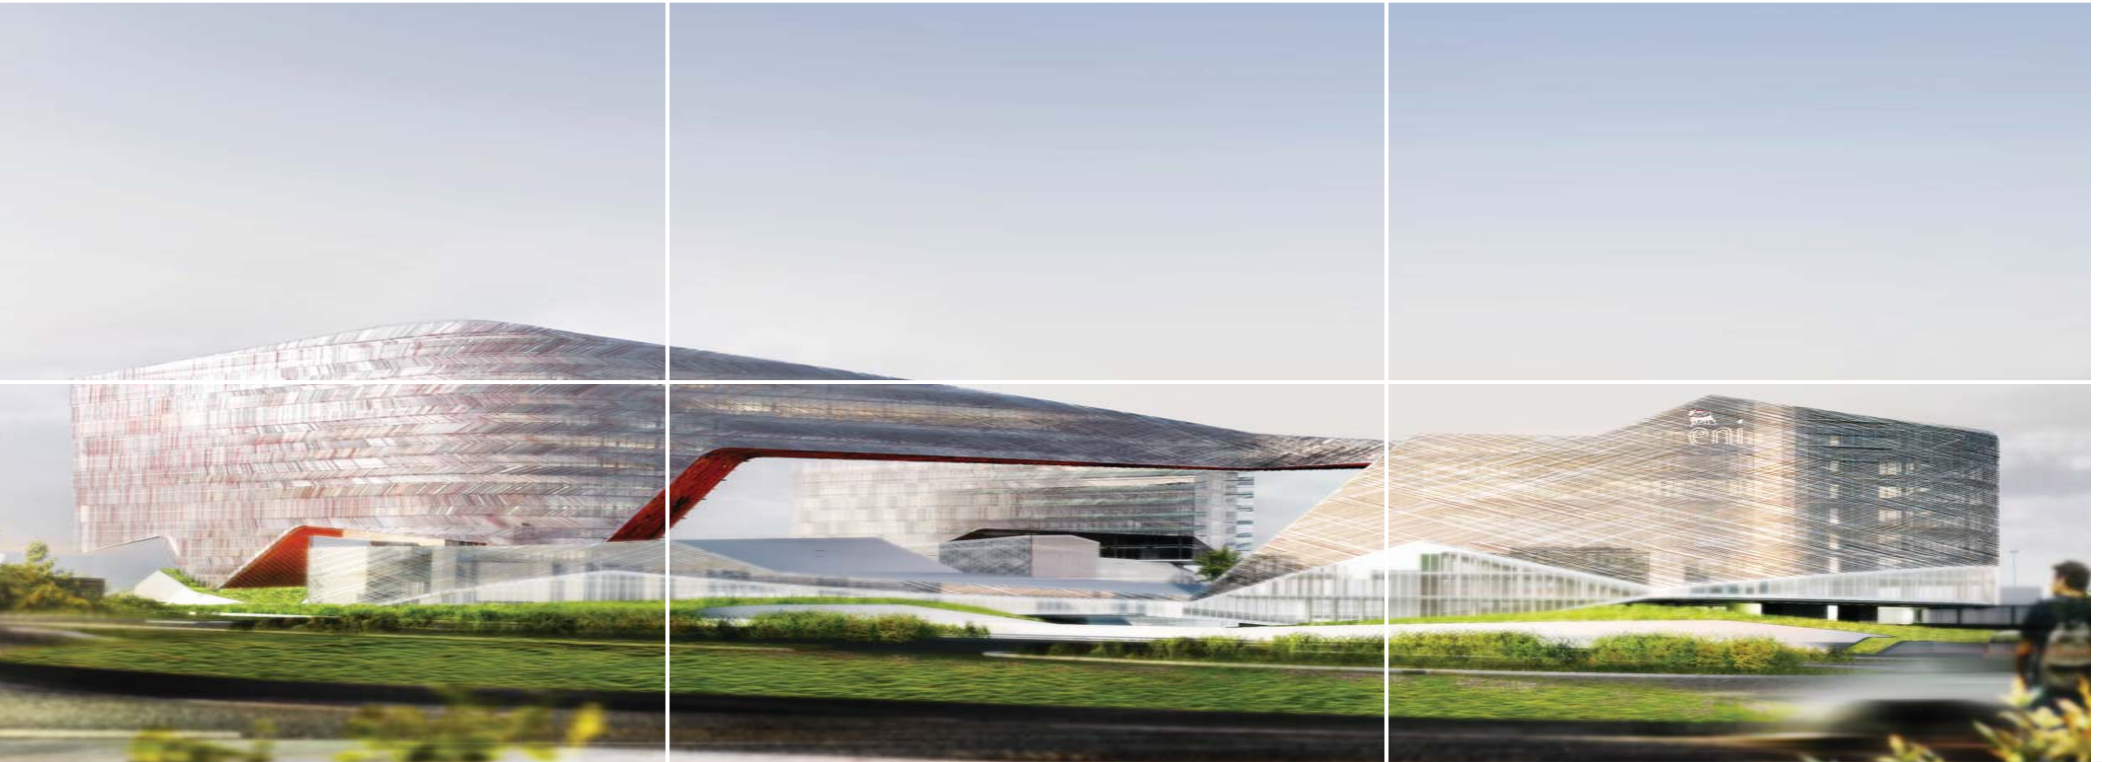

ARCHITECTURE-LANDSCAPE

VISION &
INNOVATION

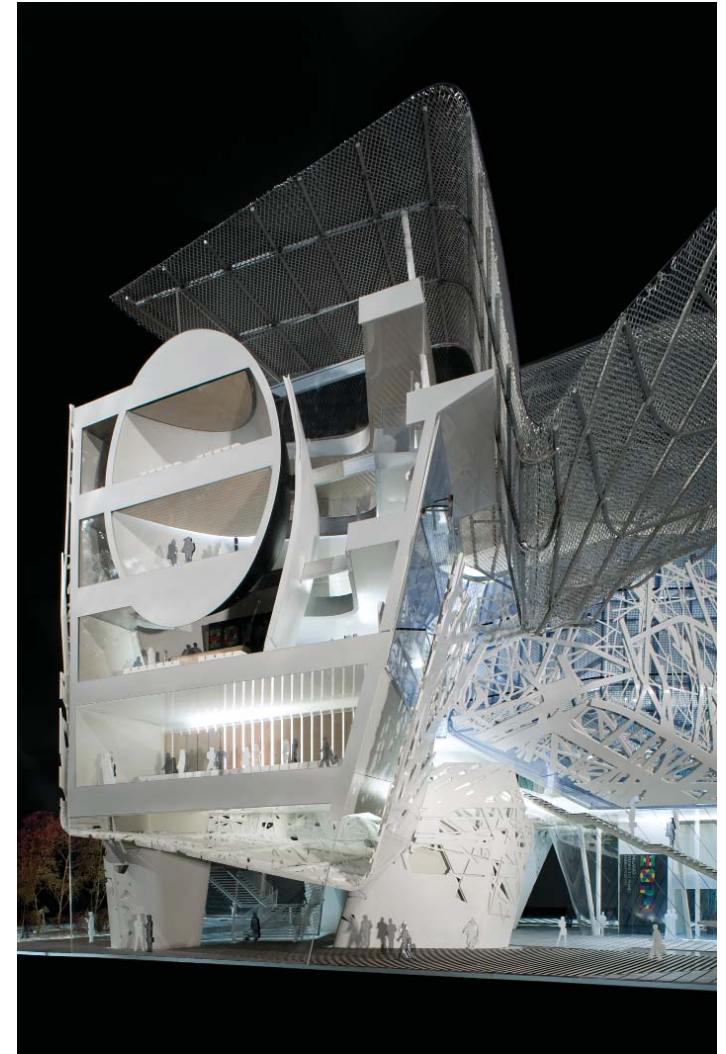

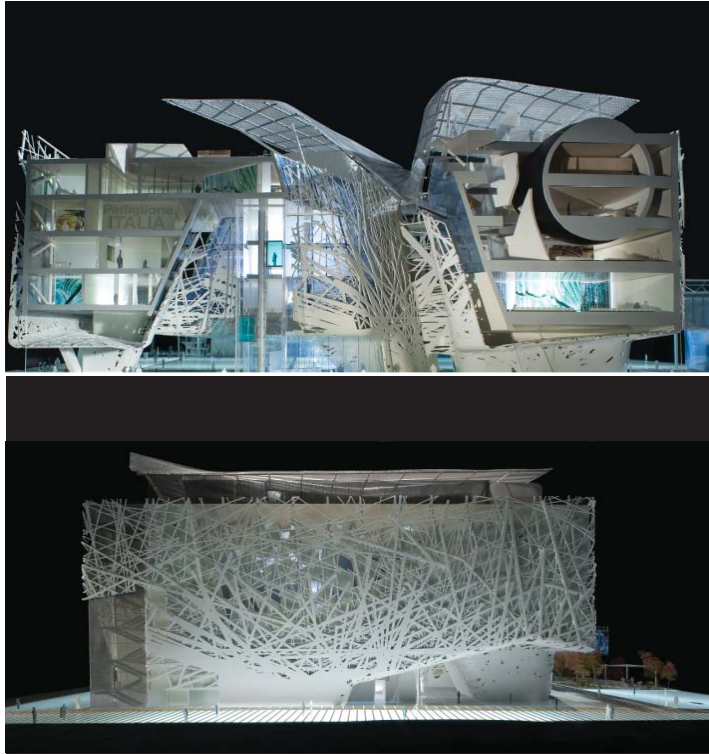

WAY- ARCHITECTURE LANDSCAPE

INTRO_00

BEYOND ARCHITECTURE

NEW
SHAPES

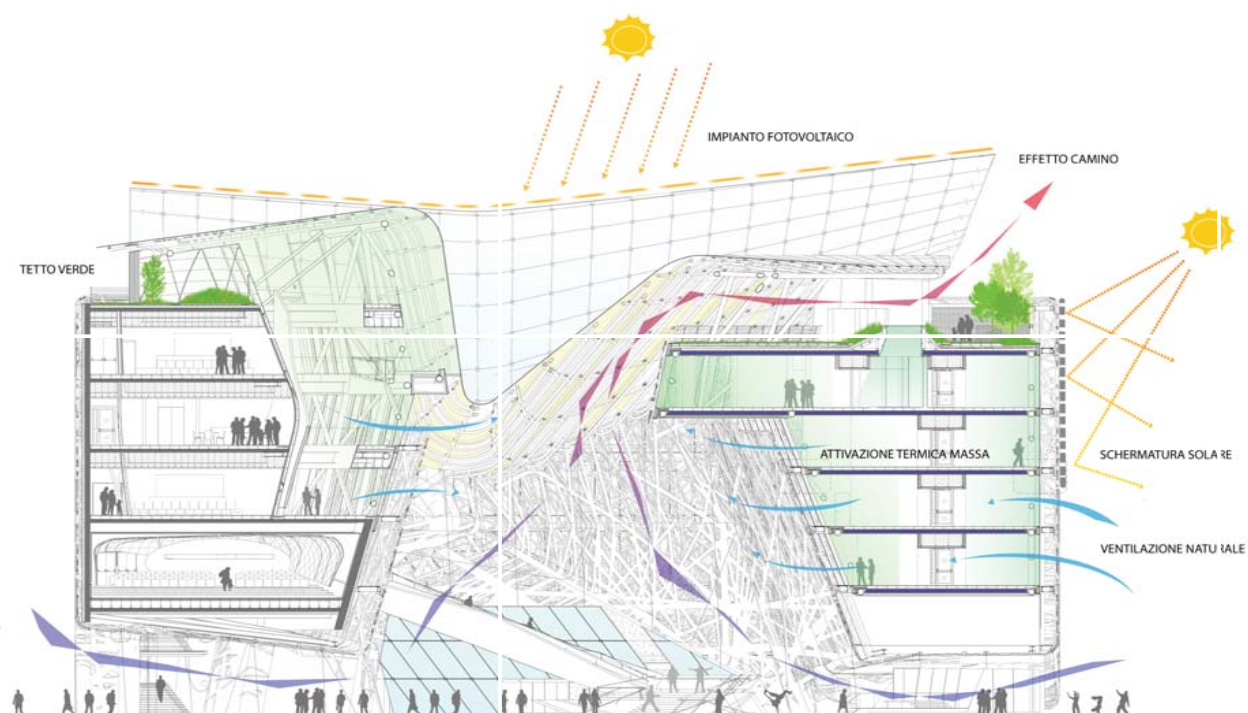

A vision is the ability to look beyond what is usual and well-known. In its projects Nemesi tries to find new ways of looking at problems and opportunities. What emerges from this process is usually unsuspected and unique. Ambitious clients can find their answers, and discover new possibilities. Architecture, urban planning, interior design, are all part of this vision, that means the ability to see, beyond architecture.

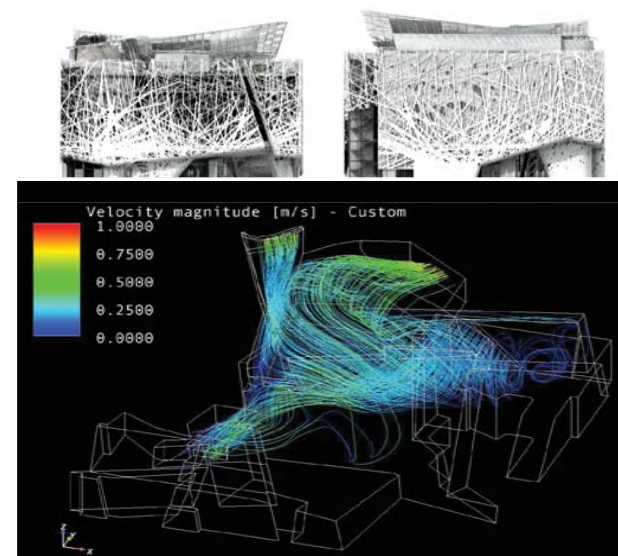

VISION & INNOVATION

ENVIRONMENTAL SUSTAINABILITY

ENERGY CONTROL

ITALIAN PAVILION:
zero energy
consumption

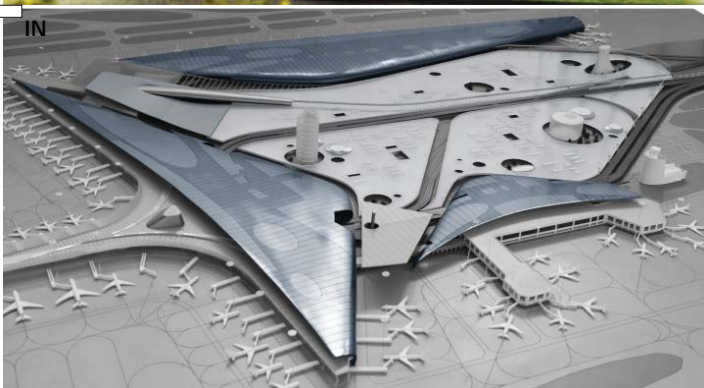

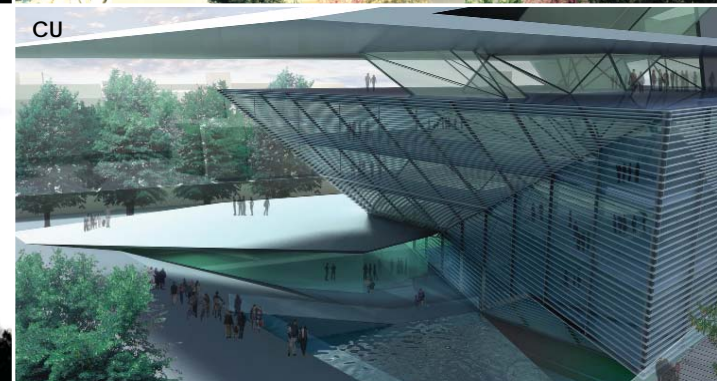

ENI HEADQUARTER:
leed gold
certification

In recent years, Nemesi has devoted itself to environmental sustainability developing a deep relationship with the context and its resources. Nemesi projects are focused on the optimization of energy consumption in each phase of the project.

In particular, several projects in France have been certified HQE (Haute Qualité Environnementale) and BBC-EFFINERGIE. Nemesi has developed other international 'green' projects, such as Leed Gold for the Eni's headquarter in Milan, and the 1° prize Halcim award for the project of Valle dei Mulini in Italy.

The Italian Pavillion for expo 2015 is conceived to produce as much energy as that consumed.

■ ENVIROMENTAL SUSTAINABILITY

Model_Padiglione Italia

The Italian Pavilion - Expo Milan 2015

The Italian Pavilion project, winner of the international design competition awarded by Expo 2015 S.p.A., foresees the construction of the Palazzo Italia, a building of approximately 12000 sq. m. destined to be used for exhibition areas, offices, institutional and event spaces and pavilions situated along the Cardo, for a further 9000 sq. m. of area devoted to exhibition spaces. The Palazzo Italia is the symbolic heart of the whole project, destined to remain even after the end of the Event.

The general concept of the Palazzo Italia is that of an architectural landscape, in which the building assumes, through its very skin and volumetric distribution, the appearance of a tree-forest in which visitors can immerse themselves and live an emotional experience.

Palazzo Italia, an osmotic organism with the environment

The dimensions of the project builds an architecture that is alive and interactive, that, like a tree, is able to exchange energy both actively and passively with the outside. The building is bioclimatic that will follow the Class A+ certification.

The concept of the tree-forest takes shape primarily thanks to the technological and energetic framework of device points that makes the building an osmotic organism with its environment.

The tree building exchanges energy through:

- The branched outer skin in premixed photocatalytic cement
- The glass photovoltaic canopy that captures solar energy and contributes to the formulation of the microclimate of the square below.

LA FORESTA URBANA

PROLOGUE: THE CITY OF THE FUTURE
The urban forest is a concept that has been around for a long time. It is a way of thinking about the city that is both practical and idealistic. It is a way of thinking about the city that is both realistic and utopian. It is a way of thinking about the city that is both human and natural.
